

Unit 3 Lab and Challenge: Laura Richardson

1) Screenshot #1: Unity Hierarchy & Inspector showing DynamicCube with Rigidbody.

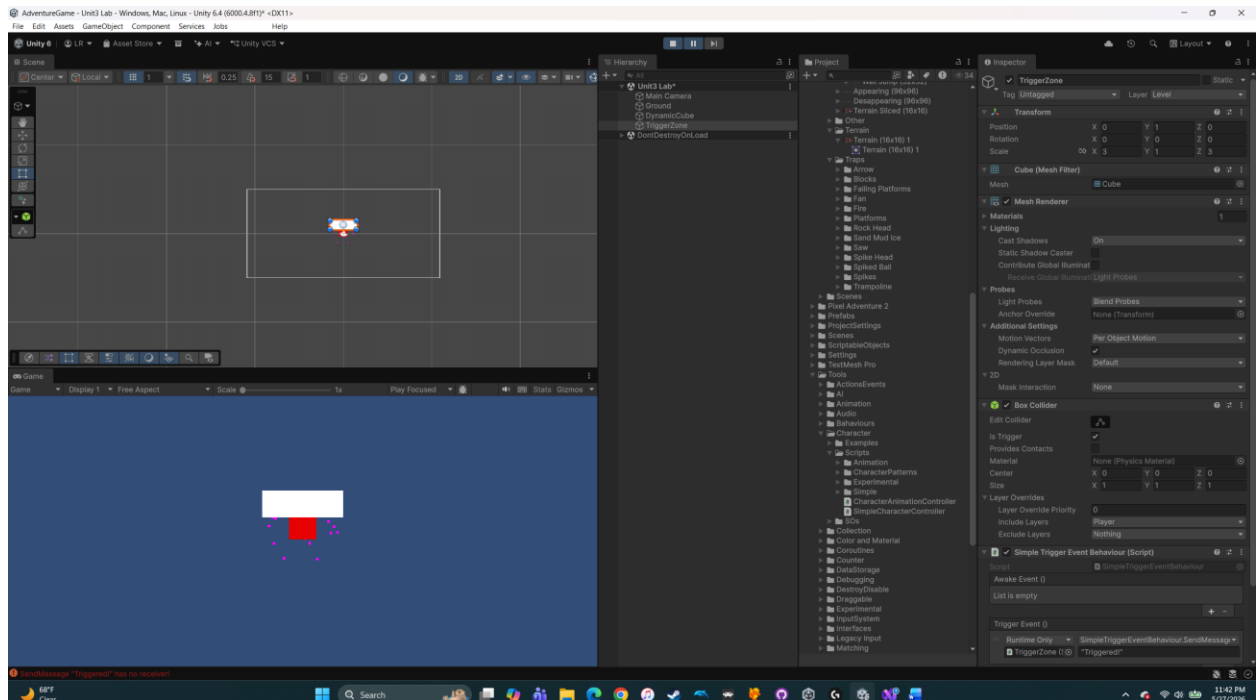

2) Screenshot #2: Unity Inspector of TriggerZone showing BoxCollider (Is Trigger) and your custom script.

- 3) **Play Mode Screenshot:** The moment **DynamicCube** enters **TriggerZone** (Console visible or color change/particles).

a) **After Trigger:**

- 4) **Write-Up (~200 words):** Summarize your steps, explain how colliders vs. triggers differ, and describe your creative extension.

a) **This lab was pretty fun.** Did a ton of experimenting and pushing myself. I couldn't figure out how to do the MonoBehavior, but I figured out how to make all the things happen with the "Simple Trigger Event". I started out pretty frustrated that I couldn't do the MonoBehavior, but watching the video, I decided the Simple Trigger Event was how I was going to do it. I figured out how to send the "Triggered!" message, initially attaching it to the DynamicCube. I then added the particle burst and change the color too. I then realized that the assignment wanted the "Triggered!" output to be attached to the TriggerZone, so that was an easy fix. The Dynamic Cube fell through the ground, so I had to adjust that like on the sample video. It was a very simple finished product, but man this was rewarding.

- 5) **GitHub URL:** Link to your fork of the Essentials repo containing your commits for this lab.
