

Laura Richardson Unit 3 Lab and Challenge:

1. Maya ASCII (.ma) File

- Your updated scene—same file with cleanup + new prop—committed to GitHub

1.

2. PDF Package (single document) containing:

- **Screenshot #1:** Outliner showing your renamed objects

1.

- **Screenshot #2:** Viewport of one cleaned object with normals/edge flow visible

- 1.
2. Cleaned up Bookshelf. There were a lot of n-gons because of the bevels. Also added edge loops to keep the corners crisp when viewing.

○ **Screenshot #3:** Viewport of your new prop in the room

- 1.
2. Added a picture frame and a flower pot.

- **100-word reflection:** Describe which cleanup step helped most and why you chose your new prop
 1. **The clean up step that helped me the most was the multi-cut tool. That bookshelf had so many n-gons, that I got familiar with the multi-cut tool. I love the insert edge loop tool as well and have used that a couple times in the past couple weeks. I added two new objects to my scene: a flowerpot and a picture frame. The table was looking bare, and I thought a flower would help, as well as that wall. I used the smooth visual graphics to see what the end product will look like once we render things.**
